設定磁碟陣列

1. 請透過機器後面的 jumper 來設定 RAID 層級。出廠預設值是 RAID 1。機器背面有三根 pin 腳用來設定 RAID 層級，若要設定 RAID 0 模式，請選用下面兩根；若要設定 RAID 1 模式，請選用上面兩根。

2. RAID 1 模式 (default)

- 1) 放置 2 顆新硬碟在 iR2622。
- 2) 兩顆硬碟進行同步寫入達到備份效果，其中一顆硬碟損壞仍可繼續運作，將損壞硬碟更換新硬碟後將會自動進行資料重建；當裝入的硬碟為 1 大 1 小時，iR2622 會將大容量的硬碟當成小容量的硬碟。

使用 RAID 1 的硬碟容量算法：
[總容量] = [容量最小的硬碟]

例：
2 x 500GB 硬碟 = 500GB
1 x 500GB 硬碟 + 1 x 200GB 硬碟 = 200GB

3. RAID 0 模式

- 1) 放置 2 顆新硬碟在 iR2622。
- 2) 將 2 顆 2.5 吋或 3.5 吋硬碟容量加總，讀取效率會加快；當裝入的硬碟為 1 大 1 小時，iR2622 會將大容量的硬碟當成小容量的硬碟。

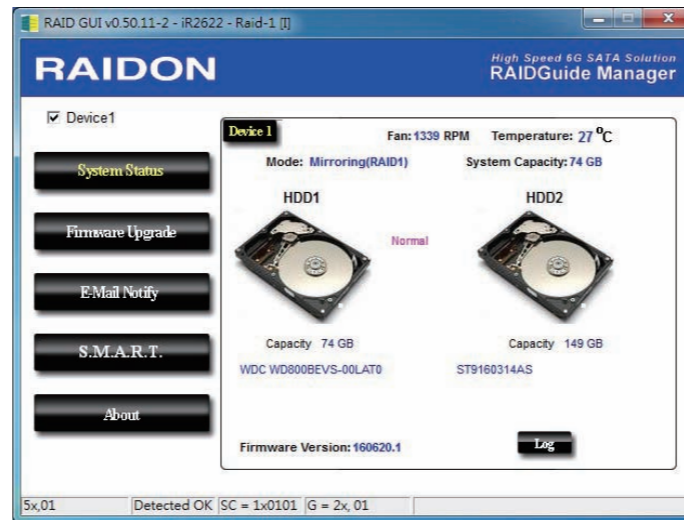

使用 RAID 0 的硬碟容量算法：
[總容量] = [硬碟數] x [容量最小的硬碟]

例：
2 x 500GB 硬碟 = 2 x 500GB = 1000GB
1 x 500GB 硬碟 + 1 x 200GB 硬碟 = 2 x 200GB = 400GB

在新增或變更 RAID 模式後需重新啟動產品，以確保完成更新為新的 RAID 模式。

啟用 RAIDGuide 軟體的畫面如下

RAIDGuide 可用來觀察 RAID 狀況，以及更新韌體，可於光碟中找到相關程式。

隨意的更新韌體將有可能導致您的系統無法正常運作，若您的系統運作一切正常，建議您不必進行韌體更新。若您有韌體更新上的疑慮，請先聯絡銳銳科技的技術服務人員，或來信 supporting@raidon.com.tw。

1

Hardware Installation

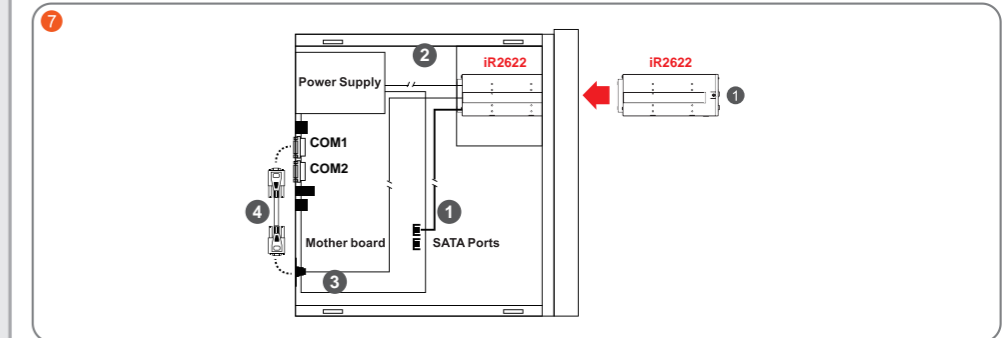

- Unlock the hard drive tray lock.
- Press down the button for hard drive clamp.
- Pull out the hard drive tray kit.
- Install a 3.5" or 2.5" hard drive on the hard drive tray.
- Secure screws from the screw kit in 4 positions.
- Refit the hard drive tray into the iR2622.

2

- Install device into one of the CD-ROM bays with screws from the accessory kit. Then properly connect SATA cable and power cable from your system to the device.

NOTE RS232 Port: For industrial control system or IPC to monitor the hardware status. More information, please contact your sales window or supporting@raidon.com.tw

- Power on your system after hardware installation is completed, and your operating system will automatically detect the hard drives from booting. Then follow the steps from your operating system to partition and format the drives when necessary, device will be ready to use once the format is completed.

RAID Mode Setting

- Please select the RAID mode with the jumper located at the back panel. The original default is RAID 1, still there are three pins at the back panel for RAID mode selection: RAID 0 mode by setting the jumper on the bottom of the two pins. RAID 1 mode by setting the jumper on the top of the two pins.

- RAID 1 Mode (default)

- Insert two brand new hard drives into iR2622.
- As RAID 1 is composed of two hard drives, it can be referred to as disk mirroring, each data will simultaneously be written in two hard drives and the data in two hard drives are exactly the same. Whenever one of the hard drives is failed, the system is still able to work normally. Once the failed hard drive is replaced by a new one, iR2622 will start auto-rebuilding.

The computing method of RAID 1 hard disk capacity:
[total capacity] = [minimum capacity of hard drive]

Ex:
2 x 500GB HDD=500GB
1 x 500GB HDD+1x 200GB HDD=200GB

- RAID 0 Mode

- Insert two brand new hard drives into iR2622.
- The RAID 0 combines two hard drives to work as a large hard drive which provides the efficient read/write performance.

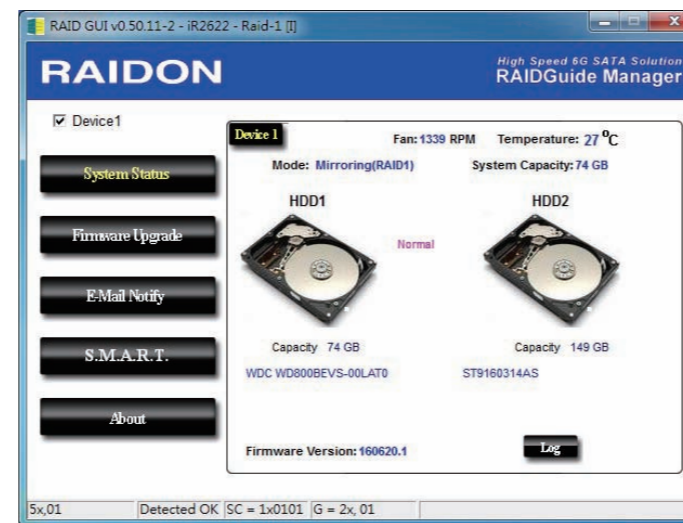

The computing method of RAID 0 hard disk capacity:
[total capacity] = [hard drive number] x [minimum capacity of hard drive]

Ex:
2 x 500GB HDD=2 x 500GB=1000GB
1 x 500GB HDD+1x 200GB HDD=2x200GB=400 GB

The product needs to be restarted after adding or changing the RAID mode, and the update is guaranteed to be the new RAID mode.

4

GUI Monitoring Software & Firmware Updating

You can use the GUI software to monitor RAID status and update firmware. Please find the related application program from the disc that provided in the package.

NOTE Updating firmware may cause your system unable to operate normally. If your system runs normally, we suggest that you do not update firmware. Should you have any doubts on firmware updating, please contact the technical service staff of RAIDON Technology Inc. or email us at: supporting@raidon.com.tw.
